

Journey

Green Forage Pea

Plant Statistics

Key Attributes:

Journey has very strong early seedling vigor and develops plant growth faster than other peas

Yield:

High Yielding Forage Pea at Flowering Flat Pod stage

Growth-Habit:

Long Vined Perfection

Vine Color:

Persistent Green

Plant Height:

100 cm

Seed:

*Small Seed
15.4g per 100 seed*

Bloom:

White Flower

Also has potential as a variety to produce pea shoots

Bred and developed by ProGene Plant Research, Journey is one of the best spring forage varieties we have released. It's small seed size provides maximum forage for your dollar. As a forage or pea shoot variety, Journey has some positive characteristics. Journey's white flower indicates that it is free of tannins which makes the pea more digestible and palatable to eat. The strong early plant growth also gives Journey the potential to reach harvest stage faster. Vine color is dark green.
