LADAK '65 ALFALFA FOR LONG-LASTING ROTATION

LADAK '65
Is a Fine Stemmed, High Yielding, Drought Resistant Forage Alfalfa.

LADAK '65
has been tested extensively for High Yield hay production under irrigation dryland and use in grass mixtures.

To grow **LADAK '65** for the highest yields, seed on a well prepared firm seed bed. Planting with a precision band or cultipacker seeder, the seed should rest just below the soil surface or no more than 1/2" deep.

For best results, soil pH should be about 6.5 to 7.5 but a soil test is the best guide to your pH and fertility needs.

Tested by time, **LADAK '65** alfalfa is the one all others are measured by. This winter hardy alfalfa was developed specifically for the dryland grower. It combines the qualities which pay best for intra-mountain agriculture.

Use **LADAK '65** as crop insurance for tremendous 1st cutting yields and Winter Hardiness.

Besides having a very high level of Wilt-Resistance, it is believed to be one of the most Winter Hardy alfalfas in the World today.

- ***Outstanding Palatability***
- ***Drought Resistance***
- ***Winter Hardiness***
- ***Wilt Resistance***
- ***Extra Long-Lasting Vigor***

A portion of the proceeds from each sale of Certified Ladak '65 goes to MSU Ag Research Laboratory
